

DC PUBLIC LIBRARY

Anacostia, Washington DC

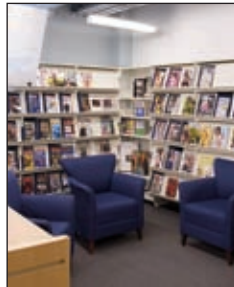

Client Project

Interim Library

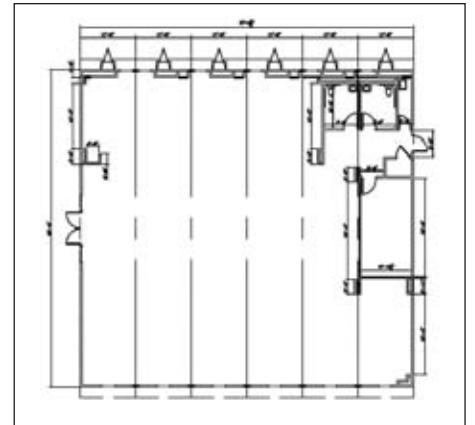

Client Need

An open space design that creates an inviting appeal to the public and allows limitless access to all corners of the library with minimal office and facility space.

The Williams Scotsman Solution

The 4,320 sq.ft. building was composed of six – 12’ x 60’ x 15’ modules. The clear span space and opened ceilings revealing exposed trusses, HVAC duct work, and suspended light features provide an industrial look which also gives the illusion of a larger space. Clean crisp external finishes, stairs, ramps, canopies, decorative banners, and fencing continue the industrial impression externally. The client appreciated the efficient installation process, flexibility, and future reuse possibilities of the modular process.

Milestones: Production began on 12/18/06 and date of occupancy was 3/12/07

The **Modular Building Institute (MBI)** awarded this project an **Honorable Mention** in the category “Institutional or assembly under 5,000 sq. ft.” in April 2008.
