Williams Scotsman Expands Focus on U.S. Healthcare Market

Company Extends Footprint Through Group Purchasing Program and Project Success

Baltimore, MD – June 14, 2006 – Williams Scotsman International, Inc. (NASDAQ: WLSC) is pleased to announce its continued commitment to providing builders, architects, and Premier healthcare members quality solutions to the time-sensitive occupancy demands that often accompany healthcare building projects. Exhibiting this month at the Premier Annual Breakthroughs Conference in Orlando, Williams Scotsman provides modular space solutions, including development of large permanent modular building projects from initial design to delivery and installation. The flexibility of modular construction allows medical and healthcare delivery organizations to operate with minimal interruptions during refurbishment, renovations, and expansion of healthcare networks.

Premier, Inc. is a strategic healthcare alliance that provides group purchasing benefits, among other performance and advisory services, to its member hospitals. A member of Premier's supply chain since 2004, Williams Scotsman has provided hospital facilities, medical treatment centers, and specialty outpatient care clinics with modular space, reducing the cost and timeline for procuring facilities for patient care and administrative functions. McGraw-Hill Construction Research estimates that healthcare building projects will increase to 107 million square feet this year. The alliance between Premier and Williams Scotsman provides an effective purchasing channel for healthcare systems across the United States.

Another demonstration of success in the healthcare facilities sector, Williams Scotsman recently completed a project on the Fort Lewis, Washington Army base. Global Engineering & Construction, LLC contracted with Williams Scotsman to deliver 36,000 square feet of modular space, creating the Madigan Family Medical and Dental Center. Just 73 days after the order, the first group of modular units arrived on site and was set into place. This versatile multi-purpose configuration consists of exam rooms, a pharmacy, physical therapy space, staff restrooms and locker rooms, practitioner offices, dental stations, and other amenities.

Peter Bensch, Sr., Project Manager for Global Engineering commented, "The Modular Force Support Family Medical and Dental Clinics are designed as mission essential support elements that were constructed under the direction of the Secretary of the Army ... Williams Scotsman's part in the Global [Engineering] team efforts has helped provide a top of the line product for the government. The government has extended us a compliment that our project was one of the best in the country. I commend the early delivery while under enormous pressure to get the units onsite so that Global could complete work and finish within our time schedule. Global Engineering looks forward to using William Scotsman as a member in any future modular projects that the government presents to us now and in the future."

"We are pleased to have played a role in serving the medical needs of military families. The successful completion of the Fort Lewis project demonstrates the value that modular building technologies bring to the healthcare and government sectors," stated Gerry Holthaus, President and Chief Executive Officer for Williams Scotsman, Inc.
